About me

- 20+ years in Pharmaceutical R&D across leading organizations
- Currently working as Associate Director- DMPK, Aragen Lifesciences
- Proven leadership in drug discovery & preclinical programs
- Working at the intersection of science - human health - drug discovery and transforming novel ideas into effective therapies.
- Strong portfolio of publications, patents & Awards. Conferred with Outstanding Scientist of 2024, Best Scientist of the year & Scientific Excellence awards
- Experience leading cross-functional and global research teams
- Result Oriented. Focused on delivering impactful and translational outcomes

Editorial

Outstanding early career scientists for 2024

Check for updates

In 2021, the Editorial Staff and the American Pharmacists Association began recognizing outstanding early career scientists for publishing their most original and significant scientific findings in the *Journal of Pharmaceutical Sciences (JPharmSci®)*. The individuals listed below are considered by their co-authors as the primary authors and major contributors to the research in their manuscripts. The individuals were identified as either graduate students or, within their first 10 years post-Ph.D. in a postdoctoral or permanent appointment (i.e., an academic, foundation, government, or industrial scientist position). These individuals have published research articles that were recognized by the Editors for presenting the most original and significant scientific findings in the period of October 1, 2023 to September 30, 2024. Each of the articles authored or co-authored by these individuals was recognized as either one of the six monthly featured articles for a journal issue, or as an article that appeared in one of the quarterly virtual issues that appear on *JPharmSci®*'s web page (<https://jpharmsci.org/>). The purpose of this recognition is to bring attention to an early-career individual's scientific achievements, and to publicly express our appreciation for their selection of *JPharmSci®* in which to publish their research findings.

2024 Outstanding Early Career Scientists and their current affiliations:

Ann K. Nowinski, Pfizer (USA)
Zehao Pan, Princeton University (USA)
Simone Perazzolo, University of Washington (USA)
Sadegh Poozesh, AstraZeneca (USA)
Hitesh S. Purohit, AbbVie, Inc. (USA)
Caterina Riccardi, Regeneron Pharmaceuticals, Inc. (USA)
Karthik Salish, Genentech, Inc. (USA)
Satinder Singh, Aragen Life Sciences Limited (India)
Daniel Scotcher, University of Manchester (UK)
Mikayla M. Smith-Craven, University of Kansas (USA)
Nidhi Thite, University of Colorado (USA)
Jun Wang, Boehringer Ingelheim Pharmaceuticals, Inc. (USA)
Lindong Weng, Novo Nordisk (USA)
Axl Laurens Lukas Windah, Universitas Airlangga (Indonesia)
Joshua M. Woods, Pfizer (USA)
Yining Xie, Monash University (Australia)
Yuly Chiang Yu, University of Maryland (USA)

We congratulate these early career scientists and thank each and every one of the scientists who publish their research findings in *JPharmSci®*!

ARAGEN
LIFE SCIENCES

Trusted R&D and Manufacturing Partner

scientific research plays a vital role in improving healthcare, and organizations that combine innovation with collaboration are driving progress in drug discovery. Among them is Aragen Life Sciences Limited, a multinational CRO/CMO (Contract Research, Development, and Manufacturing Organization) that is redefining the concept of innovation in the life sciences industry.

With a team of over 4000+ scientists, including more than 450 PhDs, Aragen leads research and operations across seven modern facilities in India and the United States. The company supports every stage of the R&D process from early discovery and molecular design to preclinical and CMO manufacturing using advanced digital and scientific tools.

Leading this scientific progress, Dr. Satinder Singh, Associate Director - DMPK, has an inclusive experience in immunology, pharmacology, and vaccine research. Since joining Aragen in Jan 2022, he has conducted many non-toxic in-vivo PK and DND enabling studies, which have contributed to the company's global health impact.

In this exclusive conversation, Dr. Singh shares insights on Aragen's role in preclinical research and explains how innovation, teamwork, and scientific excellence continue to drive the company's growth and the global impact in healthcare.

Could you please start by sharing a brief overview of your professional journey and what inspired you to enter the preclinical services industry?

I have spent over two decades in Indian pharma and biotech R&D, contributing across diverse verticals, including NCE

discovery and preclinical development, immunomodulatory cellular therapies, and generic drug product development.

I began my career in 2004 at Zydus Research Centre as a molecular pharmacologist, focusing on efficacy and toxicity biomarkers to shorten promising NCEs across multiple therapeutic areas. At Cadila Pharma, I worked on developing an allogeneic pancreatic cancer vaccine using heat-killed *Mycobacterium* w (Mw), a potent TLR-2 agonist, as an adjuvant, and was honored with the "Best Scientist of the Year" award in 2010 for my contributions. From 2011 to 2014, as Deputy Manager at Panacea Biotech, I contributed to anti-diabetic, anti-depressant, and anti-infective NCE drug discovery teams.

As Senior Manager at IPCA Labs (2014-2021), I collaborated on developing an enhanced orally bioavailable formulation of the antimalarial "Atovaquone-Proguanil" (Atoguanil), which was later sourced by MMV for clinical evaluation. Since 2022, as Associate Director-DMPK at Aragen, I lead discovery projects bridging science and patient care, overseeing in vivo PK studies in non-mammals such as rabbits, dogs, and monkeys, toxicogenomics studies in rodents, and IND-enabling ADME studies. In 2024, I was recognized as an outstanding early-career scientist by the American Pharmacists Association for presenting the most original and significant findings in my review, "Targeted Protein Degradation: The Druggability Perspective."

Preclinical Contract Research Organizations (CROs) offer a dynamic career path with exposure to cutting-edge infrastructure, facilities, and resources that support fast-paced drug discovery. Professionals gain the flexibility to work across multiple therapeutic areas, including neurobiology, oncology, inflammation, and autoimmune disorders. CRO experience allows interaction with

scientists worldwide and familiarity with emerging drug targets, new research strategies, and advancements in science and technology. This environment fosters broad scientific knowledge, versatile technical expertise, and a deeper understanding of current trends in drug discovery.

In your view, what key factors have contributed to Aragen's growth and success within the preclinical CRO space?

The futuristic vision of management has driven the growth of Aragen over the past 24 years. Established in 2001, Aragen is a trusted R&D and API manufacturing partner to the global pharmaceutical and biotech R&Ds. From concept to commercial, Aragen transforms scientific ideas into solutions for better health.

Be it large, mid-size, or small pharma or biotech, an agricultural or animal healthcare company, Aragen provides global resources and time-tested capabilities at every stage of the biopharma lifecycle, in both small and large molecule segments. Aragen does not merely offer preclinical services but collaborates with clients in an adaptable and flexible manner to meet the project demands and support their pursuit to discover new drugs.

How do you see preclinical R&D outsourcing helping pharmaceutical R&D companies enhance their operational efficiency and market reach in 2025?

The global preclinical CRO market was valued at US\$7.1 billion in 2023 and is growing at a CAGR of 7.0%. It is projected to reach US\$11.3 billion by 2030.

Dr. Satinder Singh
Associate Director - DMPK
Aragen Life Sciences

"With its global expertise and strong partnerships, Aragen Life Sciences continues to drive innovation and excellence across the preclinical research space."

About
Dr. Satinder Singh

Dr. Satinder Singh has over 20 years of experience in Indian pharma and biotech R&D. He began his career in 2004 at Zydus as a Molecular Pharmacologist. From 2008 to 2011, he worked on cellular cancer vaccine immunotherapy at Cadila Pharma, developing a lyophilized whole-cell pancreatic cancer vaccine. Between 2011 and 2014, at Panacea Biotech, he focused on antidiabetic, antidepressant, and anti-infective drug discovery. From 2014 to 2021, at Ipca Labs, he developed generic formulations and explored drug repurposing, including an enhanced bioavailability Atoguanil formulation sourced by MMV for clinical studies. Since 2022, he serves as Associate Director at Aragen Life Sciences, leading DMPK studies.

SPEAKING WITH

“Developing capabilities to profile the next gen compounds in new modalities is expected to drive preclinical CRO growth”

The preclinical Contract Research Organisation (CRO) sector in India is witnessing massive transformation with huge investments being made in this sector by domestic and multinational players to cater to the global needs. A significant boost to the Indian economy is expected over the next five years by the foreign and domestic investments being made in the preclinical CRO segment. In an interaction with BioSpectrum Dr Satinder Singh, Associate Director, DMPK Aragen Life Sciences, shared his insights about future growth drivers of preclinical CROs based out of India. **Edited excerpts;**

Abstract

Atoguanil™ is a novel complex of atovaquone (ATV) and proguanil (PG) with enhanced ATV bioavailability compared to Malarone®. This pilot study assessed whether the relative bioavailability (F_{rel}) of ATV, PG, and the primary PG metabolite cycloguanil (CG) following a single oral dose in the fed state of *Atoguanil* was similar to *Malarone* despite a 50% lower ATV dose. This open-label, single-dose, randomized 2-period, 2-treatment, balanced crossover study was conducted between 17th November 2021 and 18th March 2022. Eligible participants (aged 18–55 years) were randomized (1:1) in period 1 to *Atoguanil* (ATV/PG 500/348 mg) or *Malarone* (ATV/PG hydrochloride 1000/400 mg) administered following a high-fat, high caloric meal. After a 24-day washout period, participants crossed treatment arms. For the doses tested, F_{rel} was assumed similar if 90% CIs were between 80 and 125% for the geometric mean ratio of the least square mean differences for each parameter compared to 15 eligible participants. The mean ratio for ATV-CG was 0.93 (95% CI 0.87–1.04) but

Some Thoughts on How to Secure Sustainable Future in Biosimilars World

Biosimilar medicines provide a major opportunity for cost savings throughout globe. However, in order to deliver these benefits it is imperative that the biosimilar medicines market remains sustainable.

Biologics, the complex recombinant therapeutic proteins produced from living organisms, have created immense value to patients due to their usefulness in prevention, treatment and diagnosing a variety of diseases such as cancer, chronic kidney diseases and autoimmune disorders; otherwise non-manageable by existing therapies. It is therefore this attribute of providing unmet medical need, which facilitated biologics to create a niche for themselves in pharma industry.

‘Biosimilars’, also known as ‘follow-on biologics’ can be vaguely considered as generic versions of the innovator products, but in reality are significantly different, than the parent molecules due to their variable composition.

Biologics versus Small Molecules

Unlike small molecules which are clearly characterizable products with well defined structures and can be produced in identical form in bulk; biologics are a mixture of related molecules with molecular weight as high as 150,000 Da, decorated by a variety of groups due to post translation modification eg. oligosaccharides, sialic acid moieties, phosphorylations etc. The post translational modifications are specific to host cell and growth conditions. It is important to note that these modifications and specific folding are very critical to the biological activity of these drugs. For example, a simple misfolding or even an aggregation can trigger immunogenicity in patients and thus can have devastating health hazards. Apart from the differences in the complex molecular structure of biologics/ biosimilars versus simple small molecular drugs of molecular weight <180 Da, the development as well as manufacturing of biologics requires highly cost intensive sophisticated infrastructure. The companies with deep pockets can well afford to have the same, but it is noteworthy that it also requires different knowledge and skill sets to handle proteins, pretty different than small molecular drugs, understanding of the living systems and the biochemistry of the host, key to sustain its life as well as expressing the desired protein.

Furthermore, compared to generic small molecules, the biological products have less shelf life and often require refrigerated conditions to maintain biological activity and prevent breakdown or aggregation. This perishable nature of biologics significantly minimizes the time frame to generate revenue out of the product, whilst inflating the shipping and storage cost.

Challenges and Remedies in Biosimilars Development

Even if the biomanufacturing process of biosimilars are followed in strict accordance with the conditions prescribed by innovator and exercising CMO, it is practically impossible to develop a replica of the parent molecule and therefore follow-on biologics are classified as ‘similar’ and not ‘same’, to the innovator product. The development and validation of multi-tier manufacturing process, therefore, requires rugged analytical and biological testing for initial and final characterization as well as efficacy and toxicity evaluation of the biosimilars.

Even a slight modification in any step during manufacturing can lead to variations in glycosylation pattern, addition of other

SARS-COV2 Vaccine-
A ray of hope for billion Indians

The fore-running vaccine candidates across the world are reaching the core human trials stages. But that ray of hope needs to reach everyone. The announcements about the vaccines and their potential availability for use among the general population in the coming weeks and months has offered hope to millions around the world in a year that has seen the COVID-19 pandemic devastate lives and economies with no signs of abating. In this article, the authors are giving an overall view on vaccine production and how government is preparing for the distribution.

Dr. Satinder Singh
Sr. Manager (IPRM), Ipsca
Laboratories Limited

The whole world is eagerly waiting for the day when the effective vaccine against SARS-COV2 becomes available to everyone in need, and help controlling the corona virus pandemic. Vaccines, as we all know, have been the best solution to curb the endemics / pandemics e.g. small pox, avian flu, influenza, measles, chicken pox and reducing incidences in the disease such as polio vaccine for poliomyelitis.

If we go in the history of the development

- Addressing oral bioavailability challenges, I contributed to development of Atoguanil [atovaquone-proguanil] formulation to make this antimalarial more efficacious and affordable by masses.
- Atoguanil was sourced by MMV for clinical BEQ study.

The Recos

Experience Certificate

To Whom It May Concern

It is my pleasure to write this certificate for Dr. Satinder Singh who has worked with Zydus Research Centre for Three years, first as a trainee Sr. Scientific Assistant and then as a Research Associate. During his tenure at ZRC, he was Responsible for preparing study protocols, study reports and SOPs. He evaluated molecular mechanisms of action of NCEs, synthesized at Zydus Research Centre, using qRT-PCR assays in dyslipidemia, obesity and inflammation projects. He screened biomarkers of toxicological significance and developed qRT-PCR/Western blotting based molecular methods for evaluating their roles in toxicity of NCEs. He performed genotyping assays for various mutant and transgenic animal strains to assist in breeding of respective strains of mice.

During his work period Dr. Satinder Singh remained involved in his work. I found him dedicated to whatever task I have provided him. He is a confident person. He is professionally sound, hard working and devoted to research. He has demonstrated motivation to take new initiatives.

By nature, he has a genial temperament and can efficiently work in a team. All my staff is pleased with him and feels comfortable in teaming and coordinating with him for the realization of organizational goals and objectives

I wish him all the best in all his future endeavors.

Dr. Mukul R. Jain
Vice President and Head

To Whom It May Concern

This letter is my personal recommendation for Dr. Satinder Singh. Beginning his career with Biotech R&D, Cadila Pharmaceuticals as Assistant Manager in June 2008, he rose to the position of Deputy Manager in Jan 2010. I have been Dr. Satinder's immediate supervisor during his 3 years tenure at Cadila.

As a person, I found him to be consistently pleasant and tackling all assignments with Dedication, Passion and Smile. He is an enthusiastic dedicated employee with reliable work habits. He often work independently, but willingly accepts suggestions and directions. He is efficient in planning projects, reliable in meeting deadlines and during his tenure, adhered to our company's standards and guidelines

On Scientific front, Dr. Satinder is very innovative and a person who always thinks out of the box, he always does it in different way. He is an original thinker and I think that Satinder is a plus for any organization seeking to be innovative. Dr. Satinder is a team player and would make a great asset to any organization looking to take their innovation to the next and high level.

Sincerely
Dr. Nirav Desai,
DGM- Biotech Research

To Whomsoever It May Concern

This is to certify that Dr. Satinder Singh S/O Late Sh. Hardyal Singh, serving a full time regular employee of Panacea Biotec Ltd. Mohali, joined New Drug Discovery Research Centre of Panacea Biotec Ltd on Sept 5th, 2011 as 'Deputy Manager-Discovery Biology'. He possess 2 years and 9 months of "on-site" *In-Vitro* and *In-Vivo* research experience with expertise in Genotoxicity and Mutagenicity studies, Pharmacokinetic studies, rodent disease model development and toxicological screening of new chemical entities (NCEs) following good laboratory practice (GLP) principles of OECD. Here I would like to specifically mention that while conducting *In-Vivo* toxicology studies he is involved in preparation of formulation, dosing, weighing, necropsy, organ collection, histopathology, documentation and submission of reports as per GLP requirements. So far, as a study director, he planned, conducted and reported quite a good number of quality *In-Vivo* single dose (Maximum tolerated dose evaluation and acute toxicity studies) and *In-Vivo* repeat dose toxicology studies of NCEs in rodents as per OECD principles of GLP.

In addition, he is also working as animal house In-Charge. His primary responsibilities encompass overall maintenance of animal house and resources as per CPCSEA norms, conducting IAEC meeting, defending protocols, ensuring animal availability through planned breeding and maintenance of animal house records and infrastructure.

He works enthusiastically and performs his duties with full dedication. His stay till date in our department is very productive and he is an asset to our organization. He can perform well as an individual and also as a team member. I consider him to be a valuable member of my team, who has consistently achieved good results and delivered up to expectations.

I wish him every success in all his future endeavors.

Sudhir Kumar Sharma (Ph.D.)

2011-2014

To whom so it may concern

I'm very pleased to provide this letter of appreciation to Dr. Satinder Singh, who worked as R&D professional with Ipca Labs for the past 7 years (Oct 2014 to Dec 2021). I oversaw Dr. Satinder's work over all these years and found him compassionate and professional and a valuable asset for our department. He was involved in facilitating pre-clinical (in labs based out of India as well as abroad) and clinical anti-parasitic drug pharmacokinetics and efficacy screening, review of pre-clinical and clinical study reports, dossier preparation for BA/BE Studies, technical troubleshooting, research article publications, evaluating drug attributes to ascertain potential for drug repositioning or repurposing, technical support to formulation development team and conceptualizing new route and new dosage form for better pharmacokinetics thus translating to better efficacy and broaden therapeutic index.

Further, he addressed the patent related queries of Ipca's biosimilar division and synthetic biology department, catered to product related queries of chemistry research and development and reviewed *in-vivo* genotoxicity and *in-vitro* mutagenicity reports to help assess genotoxic and mutagenic potential of related substances in APIs, and thus back our analytical research wing to respond to regulator queries regarding the acceptable final impurity limits in APIs.

Versatility, adaptability, critical thinking, imagination and creativity are his key strengths. Self-confidence, proactively helpful, excellent communication skills and instincts for identifying and pursuing promising leads are his key traits. His diligence in work is praise worthy.

In closing, I'd like to restate my strongest recommendation for Dr. Satinder Singh and I'm confident that he will be a valuable addition to your team and well exceed your expectations in the new role. It makes me happy to know that he is making progress in his career. I wish him the very best in his future endeavors.

- My work isn't limited to the bench science in one lab.
- Contributed in different verticals of pharmaceutical R&D.

Ready for the Next Pinnacle.....

I am open to leadership challenges for my next pinnacle, where being a part of world-class R&D team, I drive disruptive innovation and devise next gen therapies.

If you need a result oriented strategic scientist who speaks the language of both the lab and the boardroom, let's connect
